

Wide Complex Tachycardia

26.3.18

Name :
Age : Years
Height : cm
Gender : Male
Weight : kg

HR : 248 BPM
P Dur : 0 ms
PR int : 0 ms
QRS Dur : 199 ms
QT/QTc int : 263/535 ms
P/QRS/T axis : 0/90/269 °
RV5/SV1 amp : 1.303/1.535 mV
RV5+SV1 amp : 2.838 mV
RV6/SV2 amp : 1.342/2.254 mV

Report Confirmed by:

Age : Years Gender : Male
Height : cm Weight : kg
PR int : 123 ms
QRS Dur : 96 ms
QT/QTc int : 304/434 ms

RV5+SV1 amp : 2.960 mV
RV6/SV2 amp : 0.940/1.458 mV

16.

Report continued by:

Causes of Wide Complex Tachycardia

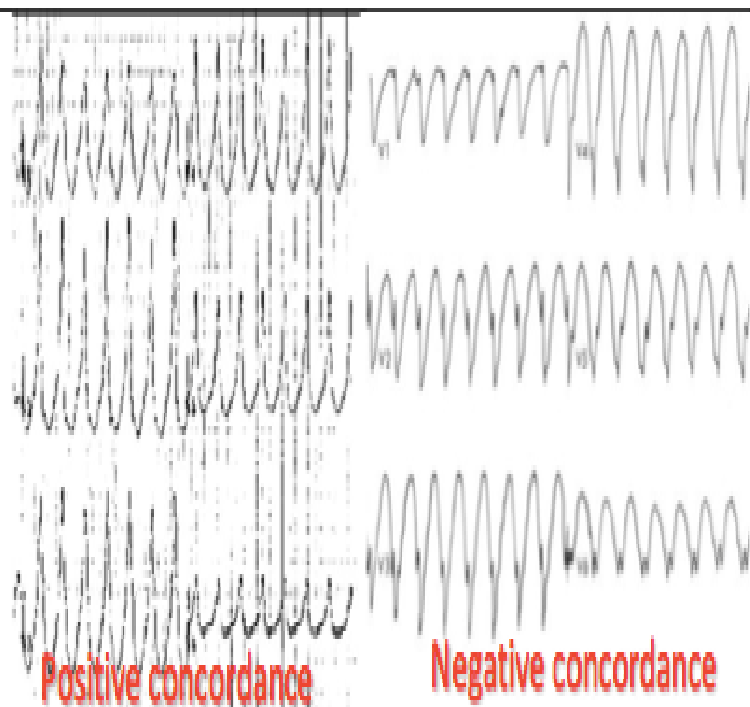

- Ventricular Tachycardia
- SVT with Bundle Branch Block
- SVT with Accessory Pathway

Differentiating VT from SVT

BRUGADA CRITERIA

	YES
Absence of RS complex in V ₁ – V ₆	VT
RS complex duration > 100 ms	VT
AV dissociation	VT
Morphology criteria	VT

1 **Absent RS complex** in any precordial lead (ie, precordial leads all monophasic R-waves or all S-waves).
≡ positive or negative concordance in chest leads

21% sensitive,
100% specific

Name :
Age : Years
Height : cm
Gender : Male
Weight : kg

PR : 248 ms
P Dur : 0 ms
PR int : 0 ms
QRS Dur : 199 ms
QT/QTc int : 263/535 ms
P/QRS/T axis : 0/90/269 °
RV5/SV1 amp : 1.303/1.535 mV
RV5+SV1 amp : 2.838 mV
RV6/SV2 amp : 1.342/2.254 mV

Report Confirmed by:

2

If any RS complex in V1-6,
check if **RS > 100ms** in one precordial lead

21% sensitive,
100% specific

3

If $RS < 100\text{ms}$,

Check for any **AV dissociation** (notching of QRS at various points, due to superimposed P-wave)

Secondary signs of AV dissociation:

Fusion beats- SV impulse reaches AV node at same time as ventricular impulse

Capture beats- SV impulse wins. Normal single QRS amidst broad complexes.

82% sensitive,
98% specific

4

If no signs of AV dissociation,
Check for characteristic features of VT in V1-2,6

98% sensitive,
97% specific

In V1, if **dominant R-wave**, look for **RBBB** morphology

3 patterns in V1-2 indicative of VT:

- Smooth monophasic R wave

- **Taller Lt Rabbit's Ear**
(Marriott's sign)

- qR complex V1

2 patterns in V6 indicative of VT:

- QS complex (no R wave)

- rS (indicates VT if LAD present)

In V1, if **dominant S-wave**, look for **LBBB** morphology

3 features in V1-2 indicative of VT:

A. Initial R wave >30ms

B. **Notching/Slurring of S wave**
(**Josephson's sign**)

C. RS > 70ms

2 patterns in V6 indicative of VT:

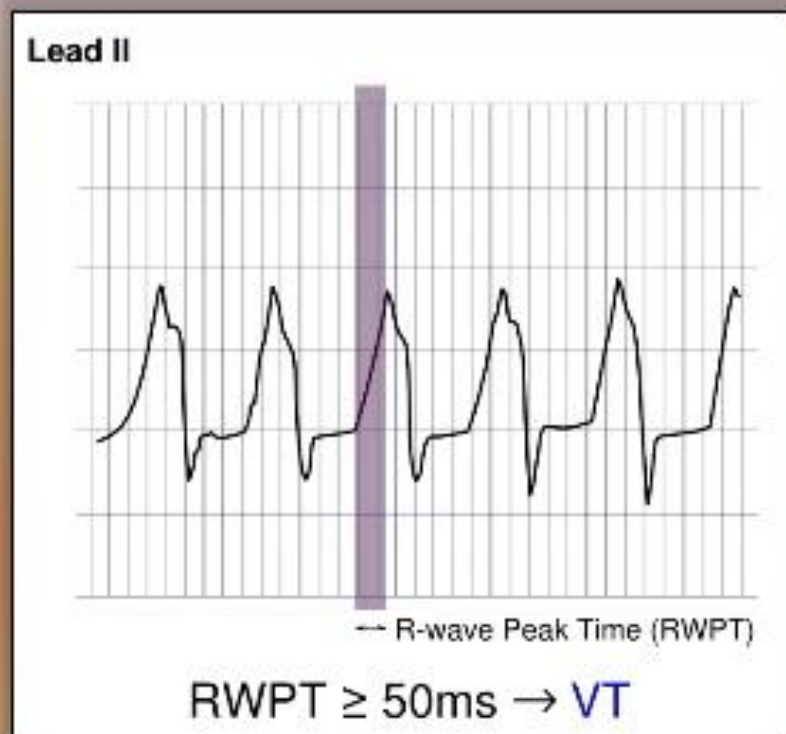

- QS complex (same as for RBBB)

- qR

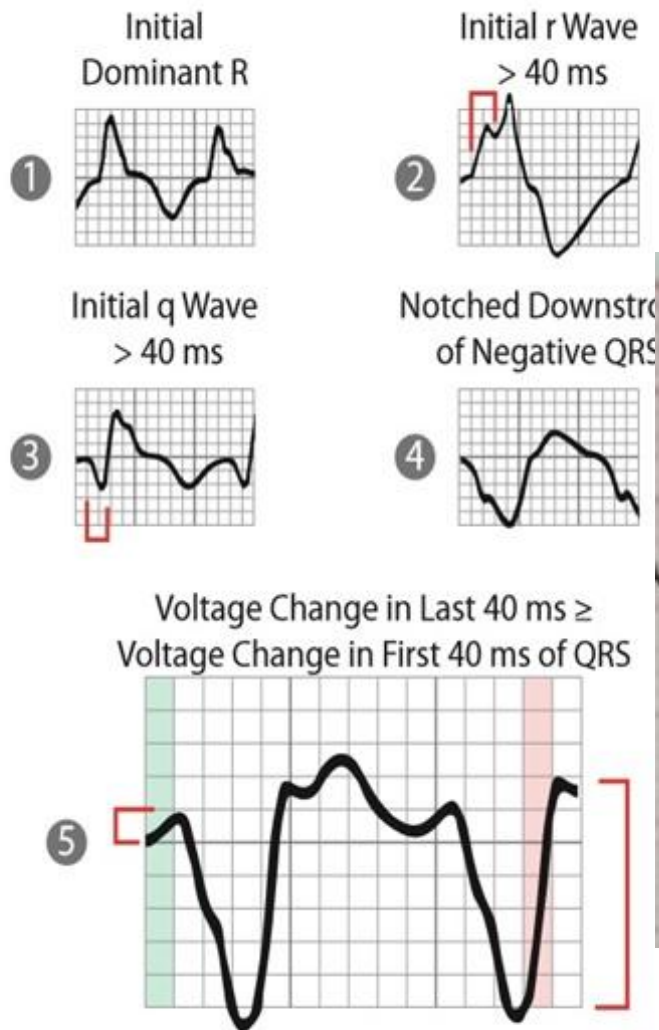

Ultrasimple Brugada criterion: RW to peak Time (RWPT)

Sensitivity 60%, specificity 82.7%.

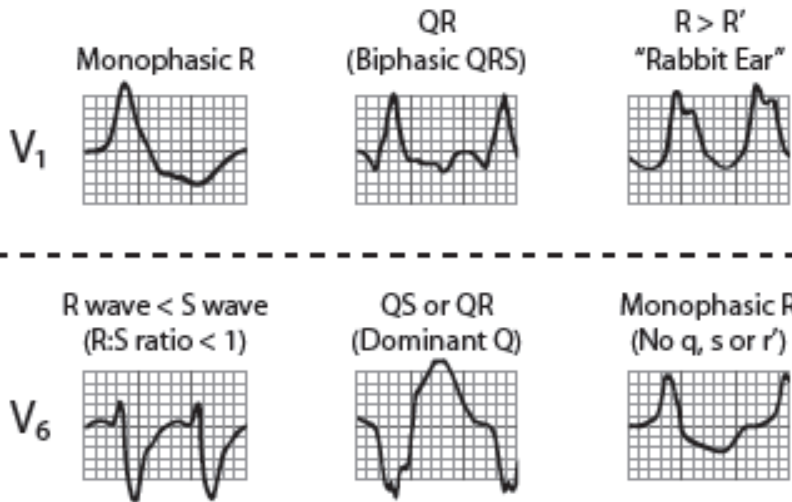

Vereckei aVR algorithm

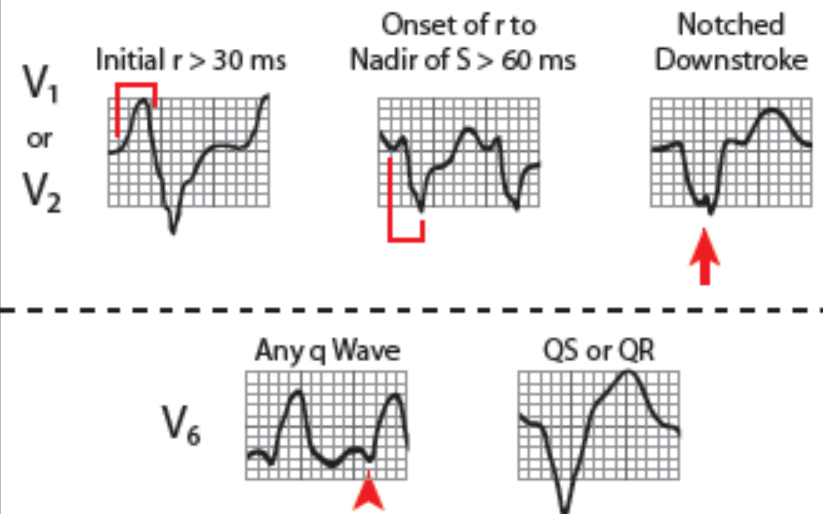

Any of the above in lead aVR \rightarrow VT
None of the above in lead aVR \rightarrow SVT

Griffith Algorithm

RBBB Morph. Criteria for VT

LBBB Morph. Criteria for VT

RBBB Morph. Criteria for SVT

LBBB Morph. Criteria for SVT

Mechanisms

- Reentry
- Triggered Activity
- Abnormal Automaticity

Causes

- Ischemic Heart Disease
- Structural Heart Disease:
 - Hypertrophic Cardiomyopathy
 - Other Cardiomyopathies
 - ARVD
- Congenital Heart Diseases (TOF) and their surgical scars

Causes contd...

- Inherited Channelopathies:
 - Long QT syndrome
 - Short QT syndrome
 - Brugada syndrome
 - Catecholaminergic VT
- Acquired Channelopathies:
 - Drugs that prolong QT interval

Causes contd...

- Electrolyte imbalances: hypokalemia, hypomagnesemia
- Sympathomimetic agents
- Digitalis toxicity
- Systemic illness causing cardiomyopathy or scar: SLE, Amyloidosis etc

Causes in <35yrs of age

- Hypertrophic Cardiomyopathy
- ARVD
- Myocarditis
- Long QT syndrome
- Congenital Coronary artery abnormalities

Treatment

- **Unstable Patients:** (Chest pain, Dyspnea, Hypotension, Altered level of consciousness)
 - **Monomorphic VT** → Synchronised DC cardioversion starting at 100J monophasic
 - **Polymorphic VT** → Defibrillation

Treatment in Stable patients

- Monomorphic VT and normal LV fn:
 - Procainamide
 - Sotalol
 - Lidocaine
- Monomorphic VT with impaired LV fn:
 - Amiodarone
 - Lidocaine
 - If drug therapy fails – synchronised cardioversion

Treatment in Stable patients

- Polymorphic VT:
 - Terminates on its own, but recurs. Sinus rhythm ecg analysed for prolonged QT interval
 - Normal QT interval treated as above
 - Prolonged QT interval
 - Magnesium sulphate
 - Isoproterenol
 - Pacing
 - Phenytoin, Lidocaine may also help
 - Procainamide and Amiodarone are **contraindicated**

Thank You
